

Technology specialists for the public sector

At Scott Logic, we build user-focused software that transforms the performance of our public and private sector clients. From citizen-centred service design to digital transformation projects, our consultants combine innovation, experience and pragmatism to deliver measurable results with every project.

We are a privately-owned British business, employing over 300 experienced consultants across 4 UK offices in London, Bristol, Newcastle and Edinburgh. We're incredibly proud of our consultants, and the brilliant results they achieve for our clients. Much of this comes down to our passion for technology, innovation, and doing things right.

What makes us unique?

Leading through values

Our leadership team has years of experience building smart, people-focussed, technology businesses. They have created a culture that values collaboration, pragmatism, and respect.

Putting people first

All our projects are delivered by full-time employees of the business, not contractors, and we have a strong commitment to personal progression and equal opportunities.

Committing to innovation

Technology is in our DNA and we invest heavily in both our own R&D programme and our contributions to the Open Source community.

Developing talent

We have strong relationships with a number of UK universities and operate a UK-wide graduate programme, helping to build a strong talent pipeline for the future of Scott Logic.

At our core we are pragmatists who enjoy developing quality technology solutions to complex challenges. For our public sector clients we deploy high calibre and often security cleared consultants both on-site and in our offices, to deliver a range of services.

Digital transformation

Our consultants support and enable UK government agencies to deliver efficient, agile and user-focussed public-facing digital services.

Software development

Our consultants create the highest calibre solutions, with the flexibility to scale your delivery team up and down as required. Our process of agile, iterative testing and development keeps you in the loop and ensures an effective solution, every time.

Data engineering

Our data engineers can work with you to accelerate data-flows, optimise storage and retrieval, scale out your processing, and enable you to build scalable, resilient systems.

Cloud services

Our experienced consultants help you take full advantage of the cloud, creating agile and efficient delivery pipelines, optimising cloud costs and defining a clear migration roadmap.

Service and product design

Our pragmatic, collaborative approach empowers stakeholders, users and developers alike, delivering meaningful end-product with minimal waste.

Full lifecycle services

Following initial build, our development and support teams can continue to enhance and support business-critical applications in line with evolving user needs and service metrics. Our Service Management capability uses ITIL and industry best practices.

Looking for a new technology partner?

Scott Logic is listed on both GCloud and DOS frameworks, and our considerable team of consultants means we are ready to deliver on short notice. If you'd like to discuss how we could work together, please contact our General Manager, Nigel Wilson
